

PAPER SACKS the ideal solution for the collection of paper for recycling

What can be more natural than using paper sacks for collecting paper from offices and households. Both the sack and collected paper can be converted into recycled paper at paper mills - so the circle is completed.

Following the success of the paper sack for the kerbside collection of garden waste the next step is the collection of paper waste. A different paper and glue specification is used in the manufacture of the sack allowing the whole sack and its contents to be milled, thereby saving handling and sorting time.

Instructions about what can and cannot be put in the sack can be clearly printed on each one, along with any further information that may be required.

Paper to collect paper – how logical!

Main sack benefits

- Both sack and contents can be milled
- Sacks sit squarely on the ground for ease of filling
- A thumb-notch allows easy opening
- Clear informative printing can be put on each sack
- Paper presents a clear environmental message to householders
- A full A4 print layout is prepared 'in-house' for customer approval prior to printing

Specifications

- 1 ply of 100 gr white semi-extensible paper
- Standard size: 600 x 800 x 250 mm (W x H x B)
- Standard bundle quantity is 25 sacks
- Other sack sizes, paper specification and bundle quantities are available

EcoSack is a part of Segezha Packaging, which has operations throughout Europe, producing more than 1,500 million paper sacks a year.
